QADSIAH

COMPLETING DESKTOP PAGES AND ADAPTING THE SITE FOR MOBILE WEB AND APP

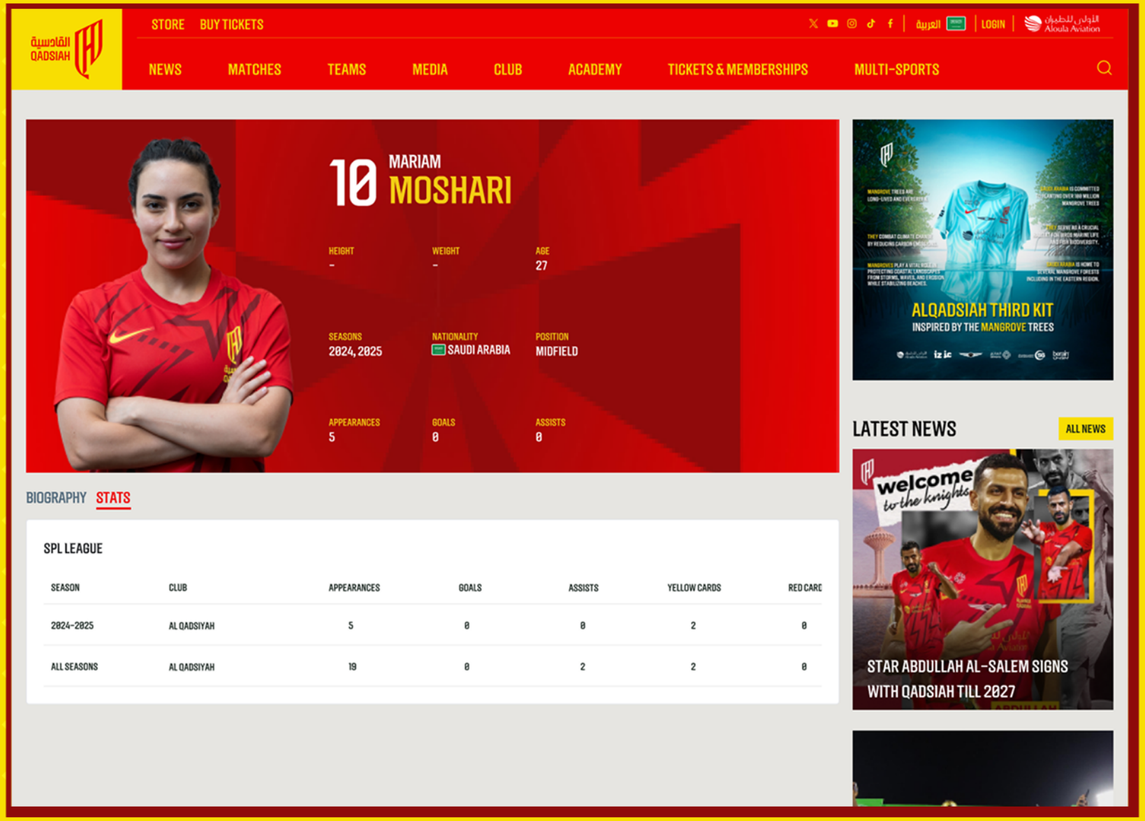

OVERVIEW

At iSolution, I joined the Al Qadsiah project after most of the desktop design was done. I completed player and management pages using the supplied content and existing layouts, and designed player-of-the-match voting and quizzes.

I then adapted the whole site for mobile web and the app, including separate navigation systems, with review from the design lead.

Role · UX/UI Designer

Company · iSolution

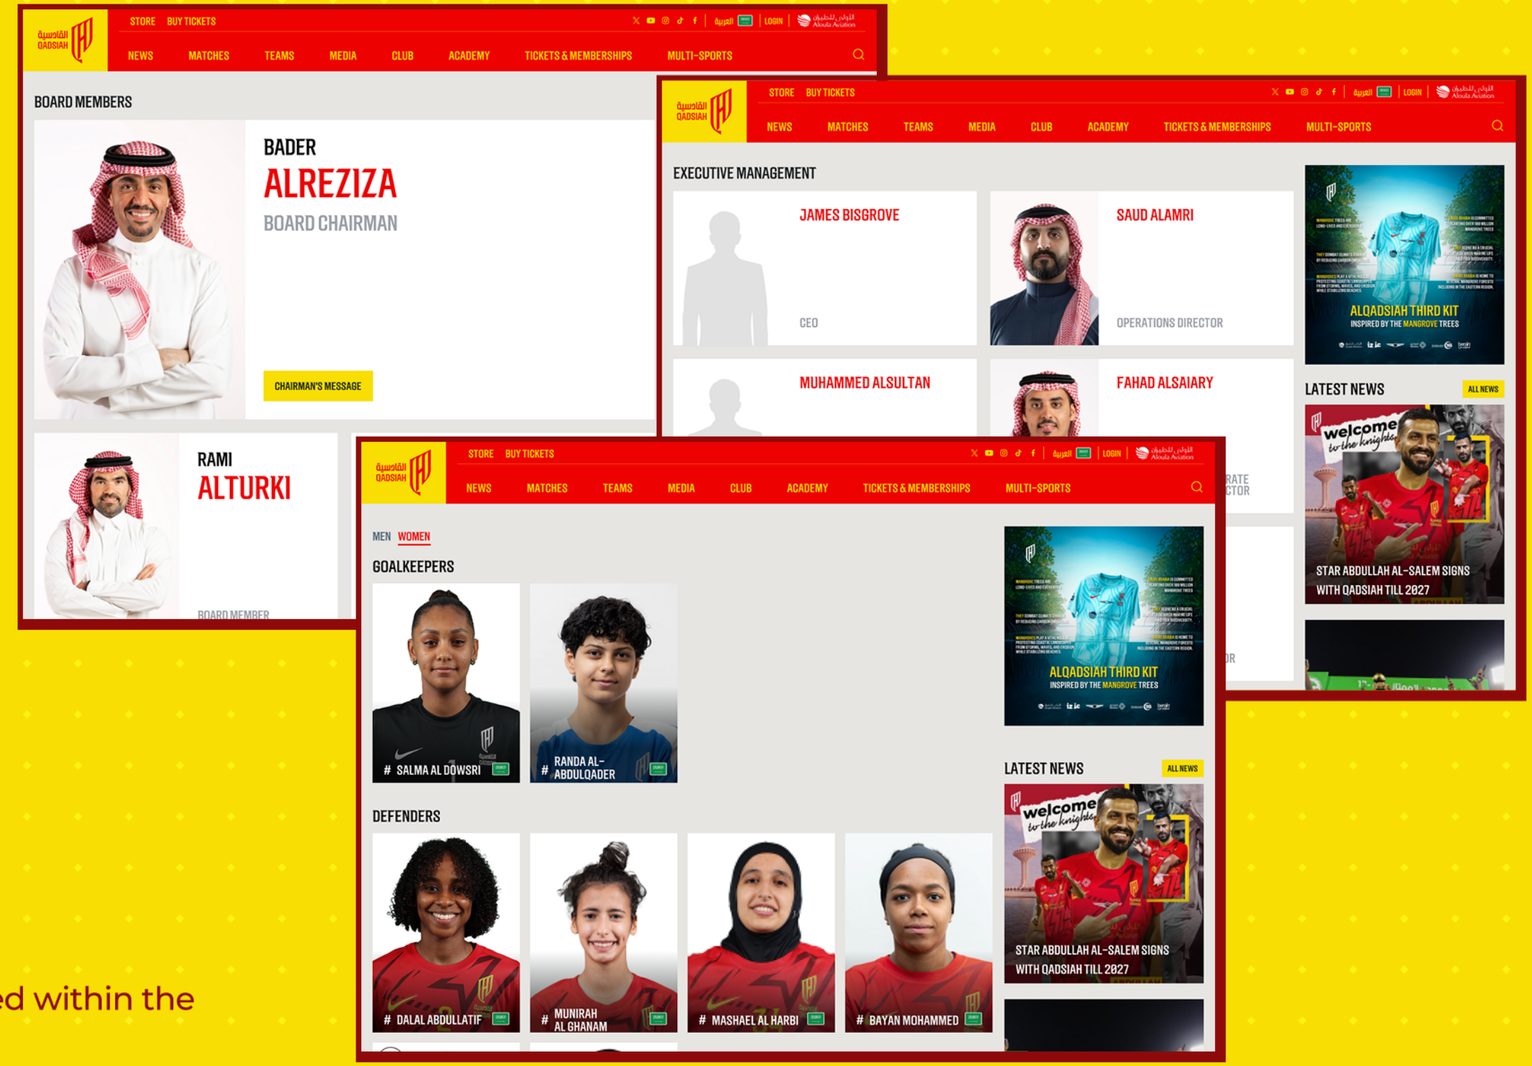

COMPLETING PLAYER AND MANAGEMENT PAGES WITH REAL CONTENT — DESKTOP PAGES

I worked from scratch & from existing layouts to complete:

- Player cards
- Team pages
- Individual player pages
- Board member page
- Executive management page
- Former players page
- Partnerships page

I filled in the supplied content and data while keeping the established design consistent.

Shown here are examples of the pages I completed within the team's existing desktop design.

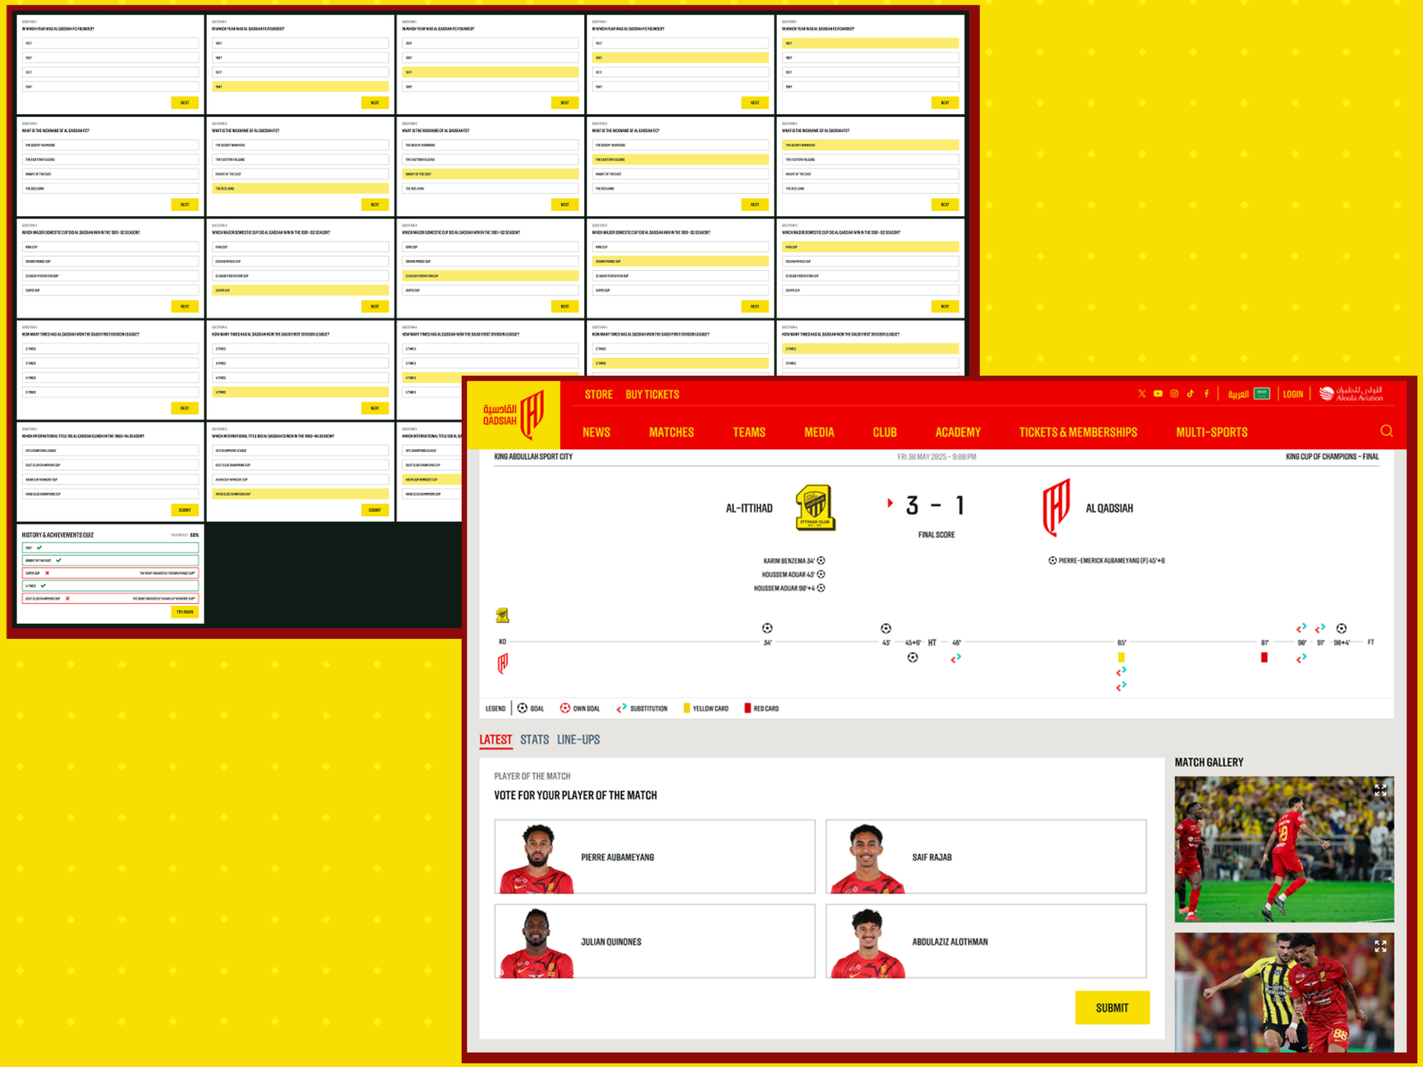

DESIGNING VOTING AND QUIZ INTERACTIONS WITHIN THE EXISTING BRAND

VOTING & QUIZZES

I created voting and quiz components using content provided by the client, keeping the existing brand identity.

I designed their selection and result states, then revised the work after the design lead's review.

The player-of-the-match voting was also placed within the match-page design.

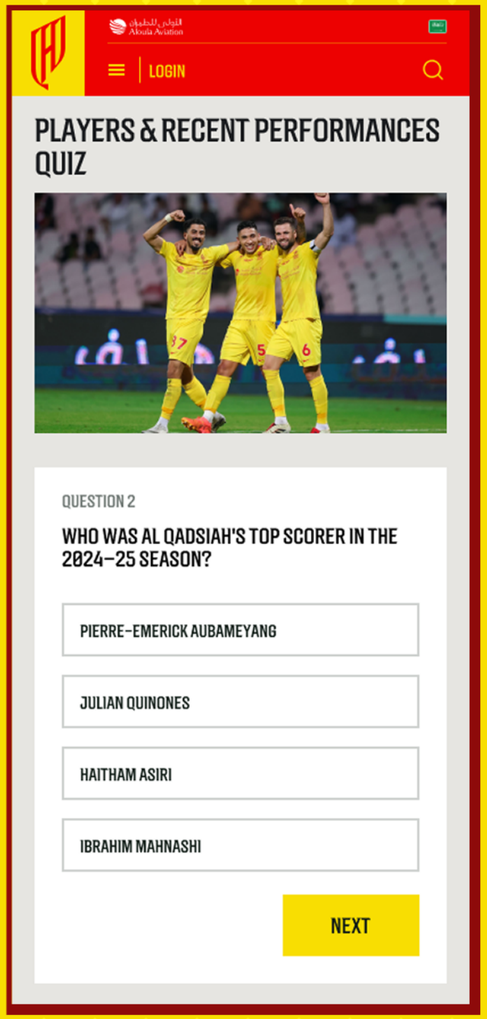

Built as reusable components and variants in Figma.

ADAPTING THE WHOLE SITE WITH SEPARATE NAVIGATION FOR MOBILE WEB AND APP

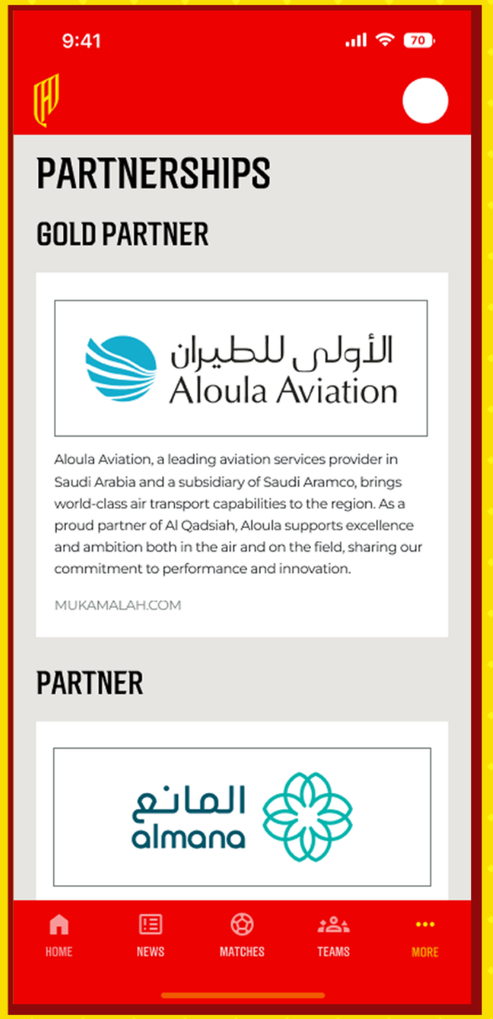

MOBILE WEB & APP

I adapted the entire desktop site for mobile web and the app, and created quiz and poll pages that were missing from the desktop designs. Most pages were shared between the two versions, while I designed a header menu for mobile web and bottom navigation with a More menu for the app.

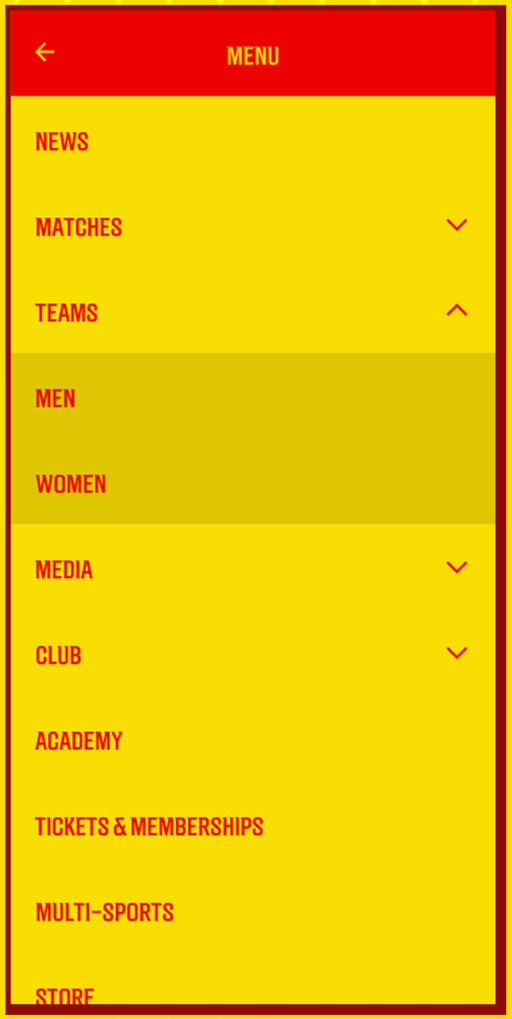

The desktop file was the largest I had worked with, with current designs mixed among old versions, unused pages, and components. Finding what to use was a challenge in itself, before I could even start adapting it for mobile.

WHAT I WOULD CARRY INTO THE NEXT TEAM PROJECT

REFLECTION

FILE ORGANIZATION AFFECTS DELIVERY

Current designs were mixed with old versions and unused components, making the adaptation harder under tight deadlines. Next time, I would establish a clear set of current designs before starting.

MOBILE ADAPTATION GOES BEYOND RESIZING

The content was mostly shared, but mobile web and the app needed separate navigation and missing quiz and poll pages. Adapting the site meant addressing those gaps too.

KNOW WHAT TO PRESERVE AND WHAT TO DECIDE

Some tasks meant completing existing layouts; others required my own design decisions. Joining an ongoing project meant understanding that distinction and keeping my additions consistent with the team’s work.
